Reviewer’s report

Title: Fanconi anemia with sun-sensitivity caused by a Xeroderma pigmentosum-associated missense mutation in XPF

Version: 0 Date: 06 Jun 2017

Reviewer: Yanbin Zhang

Reviewer’s report:

In this manuscript, Rost et al reported the third case of Fanconi anemia FANCQ patient with both FA characteristics and UV sensitivity. They identified a novel splicing site mutation in XPF/FANCQ gene and characterized the patient cells with various complementation and cell biology tools. Overall, this manuscript offers important evidence for XPF involvement in FA. Additionally, the manuscript was very well organized and the experiments and evidence are sufficient to support the conclusions. This reviewer fully supports documentation of this discovery without any reservation.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
