Title: A case of Molecularly Profiled Extraneural Medulloblastoma Metastases in a Child

Version: 1 Date: 08 Jun 2017

Reviewer: Stephen Gilheeney

Reviewer's report:

As a single patient case report, there are no "controls" to comment on.

The authors present a single patient case report of the molecular genetics regarding one patient who developed extra-neural recurrence of medulloblastoma. The timeline of the case is presented well, and the methods for assessing the tumor are adequately described. It is difficult to make conclusions on the basis of one case without becoming strident in one's commentary. The authors manage to avoid this. I find the manuscript acceptable for publication as a case report or a letter.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.
