**Reviewer’s report**

**Title:** Identification of genetic variants for clinical management of familial colorectal tumors

**Version:** 1  **Date:** 07 Nov 2017

**Reviewer:** Judith Balmañà

**Reviewer's report:**

The authors have addressed the comments made in the first review. Nevertheless, when reviewing the current evidence about the clinical validity of the only CHEK2 deleterious variant identified in this small cohort of 34 patients at risk of inherited CRC, there is not enough evidence to support an association between this germline finding and the CRC susceptibility. In my opinion, the authors remain too strong in their conclusions, as their percentages are based in only one case. I'd suggest to increase the study population, or perform a case-control study to assess the association of this variant with CRC susceptibility.

**Are the methods appropriate and well described?**
If not, please specify what is required in your comments to the authors.

Yes

**Does the work include the necessary controls?**
If not, please specify which controls are required in your comments to the authors.

No

**Are the conclusions drawn adequately supported by the data shown?**
If not, please explain in your comments to the authors.

No

**Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?**
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
