Reviewer’s report

Title: Identification and characterization of a novel 43-bp deletion mutation of the ATP7B gene in a Chinese patient with Wilson's disease: a case report

Version: 0 Date: 19 Feb 2018

Reviewer: Ahmet Koç

Reviewer’s report:

It is a case study about WD and involves deletion of a segment of DNA on exon2. This deletion mutation has not been previously described and thus I believe this work has scientific merits.

The authors also proposed a mechanism about how this deletion might have happen in the parents.

The paper is organised and written well and I believe it could be published in BMC Medical Genetics.

Are the methods appropriate and well described?  
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?  
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?  
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?  
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
