Title: Expanding the spectrum of A20 haploinsufficiency in two Chinese families: cases report

Version: 3 Date: 13 May 2019

Reviewer: Lara Bossini-Castillo

Reviewer's report:

Although the authors have included a description of the sequencing data processing pipeline, once again (and I have made this request in all my previous reviews, which have been several already), the authors have not included any QC report or information. And once again I request the sequencing QC reports. And also once again, no easily understandable coordinates (chromosome: start base pair - end base pair) were included in Figure 3.

Are the methods appropriate and well described? If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls? If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown? If not, please explain in your comments to the authors.

Unable to assess

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review? If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
