Reviewer's report

Title: Teaching percutaneous renal biopsy using unfixed human cadavers

Version: 2 Date: 27 February 2015

Reviewer: Jerome Lane

Reviewer's report:

The use of unfixed cadavers for teaching renal biopsy is of educational interest, and the authors appear to have set up a good model for providing such a course of instruction.

The authors should provide some objective means of evaluating the course effectiveness. Direct quotes from participants' evaluations should be provided. Ideally, pre- and post-course questionnaires should be administered to the participants and results should be included in order to provide an objective assessment of the course's usefulness and effectiveness.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
