Reviewer’s report

Title: Effect of tolvaptan on renal handling of water and sodium, GFR and central hemodynamics in autosomal dominant polycystic kidney disease during inhibition of the nitric oxide system: a randomized, placebo-controlled, double blind, crossover study

Version: 0 Date: 25 Jun 2017

Reviewer: Catriona Shaw

Reviewer's report:

Thank you for this interesting paper; I have some minor comments:

1. introduction: in your final paragraph stating aims I would suggest moving the "at baseline and during NO inhibition towards the beginning as this is part of the primary intervention tested

2. methods: study design- I would suggest adding here again "before and after NO inhibition using..": study reports results in placebo versus tolvaptan before and after L-NMMA infusion not tolvaptan v placebo

3. you comment on non significant changes eg crEDTA; but the study was powered using Ch20 as the primary outcome variable; I would suggest avoiding statements regarding statistical significance for secondary outcome variables,

4. discussion/conclusion- as a practicing clinician I would value hearing what the authors comments on next steps/clinical implications of their findings are
Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
