Title: Warfarin anticoagulation in Hemodialysis Patients with Atrial Fibrillation: Comparison of Nephrologist-led and Anticoagulation clinic-led Management

Version: 0 Date: 25 Oct 2017

Reviewer: Frank Van Der Sande

Reviewer's report:

I read with great interest the study of Mark L. Lipman et al. on Warfarin anticoagulation in Hemodialysis Patients with Atrial Fibrillation: Comparison of Nephrologist-led and Anticoagulation clinic-led Management. The study is well performed, of importance in daily clinical practice, especially for those taking care of dialysis patients with atrial fibrillation and ant-coagulation use. The data show that nephrologist driven management of INR is better than those by anticoagulation clinic-led management. The article suggest that INR is measured more frequently in group A although data on how often INR is measured is lacking. It would be for clinical purpose and readers of their article of interest to know how frequently INR was measured and how often adjustments were needed.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
