Reviewer’s report

Title: Case report: Bilateral renal artery stenosis as a cause of refractory intradialytic hypertension in a patient with end stage renal disease.

Version: 2 Date: 14 Nov 2018

Reviewer: Eiji Ishikawa

Reviewer's report:

Dear authors,

Thank you very much for sharing this nice case. Many points were improved, but two major critical points were still found in the revision.

1. Figure descriptions in blood pressure during three consecutive dialysis sessions before and after renal angioplasty will make us better understand intradialytic hypertension and efficacy of therapeutic interventions. So the authors should make the graphs about blood pressure during dialysis session before and after renal angioplasty.

2. The authors did not show enough evidence data on why intradialytic hypertension improved.

Again, thank you very much

Best

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Unable to assess

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

Not relevant to this manuscript
