Reviewer’s report

Title: Identification of young adults at risk of an accelerated loss of kidney function in an area affected by Mesoamerican nephropathy

Version: 0 Date: 03 Sep 2018

Reviewer: Arif Khwaja

Reviewer's report:

This is an excellently written, clear analysis of data from a community cohort of patients at risk of CKDu. The key findings that more frequent measurements of serum creatinine can better identify patients with progressive CKD does not seem particularly surprising to me, however it provides practical guidance for how to approach identification of such patients in a low income setting

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
