Reviewer’s report

**Title:** Development of anti-glomerular basement membrane glomerulonephritis during the course of IgA nephropathy: a case report

**Version:** 0  **Date:** 01 Jul 2018

**Reviewer:** Reviewer 2

**Reviewer's report:**

"PEER REVIEWER COMMENTS: To view the full report from the academic peer reviewer, please see the attached file.

REVIEWER COMMENTS FROM REPORT: Firstly it is in the true sense not a study. A study usually has a question, which the researcher wishes to answer. The author has done detailed histopathological study including EM and IgG subclass antibody demonstration. What is against practice is that treatment of rapidly progressive GN was started without biopsy and biopsy was done one month after treatment start. This is not the standard of care in RPGN.

REQUESTED REVISIONS:

It is a case report and considering a case report, presentation of report is appropriate. There should be a little more detail of clinical and investigation findings in the description of the text."

**Are the methods appropriate and well described?**
If not, please specify what is required in your comments to the authors.

No

**Does the work include the necessary controls?**
If not, please specify which controls are required in your comments to the authors.

Unable to assess

**Are the conclusions drawn adequately supported by the data shown?**
If not, please explain in your comments to the authors.

Unable to assess

**Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?**
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
