Reviewer’s report

Title: Complete biopsy-proven resolution of deposits in recurrent proliferative glomerulonephritis with monoclonal IgG deposits (PGNMIGD) following Rituximab treatment in renal allograft.

Version: 1 Date: 20 Aug 2018

Reviewer: Ben Sprangers

Reviewer’s report:

This is an interesting case report regarding recurrent PGNMIGD after transplantation and its treatment with steroids/rituximab.

Minor remarks:

- as the authors have no access to the original biopsy they should be cautious terming this recurrent disease but they address this appropriately in the discussion

- could the authors comment on the fact that extensive immunosuppressive treatment was not successful in controlling the disease pretransplantation and why the combination steroids/rituximab was able to reverse the disease after transplantation?

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
