Reviewer's report

Title: Revisiting Racial Differences in ESRD due to ADPKD in the United States

Version: 1 Date: 08 Dec 2018

Reviewer: François Jouret

Reviewer's report:

I read with interest the paper by Murphy EL, et al. First of all, there are discrepancies between text and Figures: In text, a higher incidence of ESRD secondary to diabetes in non-Hispanic black patients compared to non-Hispanic white patients is mentioned, whereas, the opposite is represented in Figure 1. A similar discrepancy is observed concerning the incidence of ESRD secondary to HTN. This questions the interpretability of the data. Furthermore, in the introduction, the authors claims that "the incidence of ADPKD is equal between races". Still, according to Reference 1 (Levy M, et al. Kidney Int. 2000; 58(3): 925-943.), the incidence of ADPKD may actually differ between races. Such a putatively lower prevalence of ADPKD in black patients is also suggested in Yium J, et al. J Am Soc Nephrol. 1994;4(9):1670-1674. These previously reported observations may significantly impact on the interpretation of the authors' results, and, therefore, should be taken into account in a more balanced interpretation.

The legend of Table 1 is confusing: "Average 10-year incidence of ESRD for each primary diagnosis in non-Hispanic Black and non-Hispanic white patient populations." Since the denominator is "numbers from the US Census", it should say "Average 10-year incidence of ESRD for each primary diagnosis in non-Hispanic Black and non-Hispanic white general population". Please correct or justify why you use the term "patients".

Please confirm that you have included your review in the 'Comments to Author' box?

As a minimum standard, please include a few sentences that outline what you think are the authors' hypothesis/objectives, their main results, and the conclusions drawn. Your report should constructively instruct authors on how they can strengthen their paper to the point where it may be acceptable for publication, or provide detailed reasons as to why the manuscript does not fulfill our criteria for consideration. Please supply appropriate evidence using examples from the manuscript to substantiate your comments. Please break your comments into two bulleted or numbered sections: major and minor comments.

Please note that we may not be able to use your review if no comments are provided.
Please only upload as attachments annotated versions of manuscripts, graphs, supporting materials or other aspects of your report which cannot be included as text in the ‘Comments to Author’ box.

Yes

**Are the methods appropriate and well described to allow independent reproduction of experiments?**
Please state in the ‘Comments to Authors’ box below what you think are the strengths and weaknesses of the methods (study design, data collection, and data analysis), and what is required, if anything, to improve the quality of reporting

Yes

**Does the work include the necessary controls?**
If not, please explain in the ‘Comments to Author’ box below.

Yes

**Are you able to assess the statistics?**

- Are the statistical test(s) used in this study appropriate and well described?
- Is the exact sample size (n) reported for each experimental group/condition (as a number, not a range)?
- Are the description of any error bars and probability values appropriate?
- Are all error bars defined in the corresponding figure legends?
- Has a sample size calculation been included, or a description and rationale about how sample sizes were chosen?

Please can you confirm which of the following statements apply to your statistical assessment of the manuscript (Please include details of what the authors need to address in the ‘Comments to Author’ box):

I have been able to assess all of the statistics in this manuscript (please refer to checklist above)

**Are the conclusions drawn adequately supported by the data shown?**
If not, please explain in the ‘Comments to Author’ box below.

No
Quality of written English
Please indicate the quality of language in the manuscript:

Acceptable

Should the manuscript be highlighted for promotional activity?

Articles that are deemed of interest to a broad audience can be promoted in a variety of ways. This could be through email updates, postings on the BioMed Central homepage, social media, blogs and/or press releases. Please indicate in the text box below whether you think this manuscript should be considered for promotional activity, indicating your reasons why (e.g. what is the most newsworthy aspect of the research).

No

Declaration of competing interests
Please complete a declaration of competing interests, considering the following questions:

1. Have you in the past five years received reimbursements, fees, funding, or salary from an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

2. Do you hold any stocks or shares in an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

3. Do you hold or are you currently applying for any patents relating to the content of the manuscript?

4. Have you received reimbursements, fees, funding, or salary from an organization that holds or has applied for patents relating to the content of the manuscript?

5. Do you have any other financial competing interests?

6. Do you have any non-financial competing interests in relation to this paper?

If you can answer no to all of the above, write 'I declare that I have no competing interests' below. If your reply is yes to any, please give details below.

I declare that I have no competing interests
