Reviewer’s report

**Title:** Extrapontine myelinolysis associated with pituitrin: case report and literature review

**Version:** 3  
**Date:** 14 August 2014

**Reviewer:** Paolo Ragonese

**Reviewer’s report:**

The authors report a case of extrapontine myelinolysis caused by rapid correction of hyponatremia determined by pituitrine use for haemoptisis.

1. The authors should detail better the causes that lead to the necessity to use the pituitrine.
2. Moreover they did not describe if the patient had a comorbid condition that could increase the risk for myelinolysis.
3. Literature review needs to be updated.
4. Reference list and formatting should be corrected.

**Level of interest:** An article of limited interest

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
