Reviewer's report

Title: Hypopituitarism after subarachnoid haemorrhage (SAH), do we know enough? a systematic review

Version: 1 Date: 27 April 2014

Reviewer: Gianluca Aimaretti

Reviewer's report:

The review paper on hypopit and SAH gives a light on this topic crossing Clinical Neuroendocrinology and Neurotraumatology.

It is well planned and performed and report clear results and conclusions.

I suggest to focus the discussion section more on the disease follow SAH, I mean hypopituitarism, more than on GHD. GHD could be considered as a signs of hypopituitarism able to evidence a more complex disease frequently involving all anterior pituitary dysfunction.

I wonder if some details on posterior pituitary dysfunction could be added.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
