Reviewer’s report

Title: Intramedullary neurocysticercosis presenting as Brown Sequared Syndrome

Version: 3 Date: 30 September 2014

Reviewer: Jacopo Bonavita

Reviewer’s report:

Discretionary Revision n° 1: at line 80 about MRI procedure, I ask why you didn’t use a contrast procedure

Discretionary revision n° 2: At line 86 during surgical procedure did you see any mass lateralization that justify the brown-sequared syndrome symptoms? I think this would be useful for the explanation

Discretionary Revision n° 3: in lines 95-97 the clinical improvement isn’t clear and in this way is incomplete the case report

Minor Essential revision n° 1: at line 33 "interanl" is a mistake, correct "internal"

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
