Reviewer’s report

Title: Intramedullary neurocysticercosis presenting as Brown Sequard Syndrome

Version: 3 Date: 18 October 2014

Reviewer: Ruth Marshall

Reviewer’s report:

Minor Essential revisions

This is a nice brief paper citing a rare cause of SCI and is thus of interest to people working in neurology, neurosurgery and spinal cord injury.

The paper asserts that this parasite is the most common CNS parasite and then says it is very rare. It is one or other and in fact is a rare presentation of a CNS parasite which is common in some parts of the World but not all. I think this needs to be clarified in the paper.

The typos (additional word, spelling, etc need to be corrected.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
