Reviewer's report

Title: Decision-making is impaired in multiple sclerosis: impact of subcortical atrophy and disease disability

Version: 2  Date: 14 January 2015

Reviewer: Katrin Starcke

Reviewer's report:

The large number of comorbid neurological diseases and the usage of medication in the patient group should be included as a limitation.

The authors should specify the consequences of poor decision making in this patient groups' everyday life. Are MS patients known to make dysfunctional decisions in their everyday life (such as patients with substance abuse or obsessive compulsive disorder)?

Is IQ usually related to GDT performance as indicated by the usage as a predictor in the analysis?

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
