Title: Acute Fatal Posthypoxic Leukoencephalopathy Following Benzodiazepine Overdose - A Case Report and Review of the Literature

Version: 5 Date: 6 January 2015

Reviewer: Shprecher David

Reviewer’s report:

The authors have done a good job of addressing concerns from each of the reviewers. We would however, request that they please reference the patient’s positive toxicology screen for cannabis in the discussion section. Just as a previously reported case that they referenced did include both benzodiazepine and cocaine exposure, this case did include exposure to at least two substances. While it is unclear how this would contribute to leukoencephalopathy, it is still important to make this distinction.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
