Reviewer's report

Title: Brain imaging in Kufs disease type B. Case report

Version: 3 Date: 8 June 2015

Reviewer: Ruth Williams

Reviewer's report:

This brief case report describes the neuro-imaging findings in a rare adult onset neurodegenerative disorder with recently identified genetic basis. Although non-specific, the pattern of progressive cortical and cerebellar atrophy is not unlike that seen in children with other forms of NCL and if recognised may direct diagnostic genetic investigations. The paper is clearly written and referenced. I recommend publication.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
