Reviewer's report

Title: Prevalence and Correlates of Apathy in Myotonic Dystrophy Type 1

Version: 3  Date: 22 March 2015

Reviewer: John Vissing

Reviewer's report:

This response to the review of their article is not appropriate.

It is unusual that the authors repeatedly throw a question back at the editorship and reviewers instead of making changes in the manuscript. It is remarkable that they several times only respond to questions of the reviewers in the cover letter with no change being made in the manuscript. Is it because they think the reviewers are the only readers who can misunderstand or pose such questions?

I think their response is unacceptable.

I could comment on each response, but really think the authors need to do their homework much better instead of putting the reviewers to work.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
