Reviewer's report

Title: Peripheral neurolymphomatosis with tracheal asphyxia: a case report and literature review

Version: 3 Date: 16 April 2015

Reviewer: Carlos Kamiya-Matsuoka

Reviewer's report:

Major revisions
1. I would like the authors to carefully proofread the entire manuscript.
2. Please delete the NAME of the patient from the figures (PET scans).
3. Authors mentioned that NL may be cured, please mention literature about this statement.

Minor revisions
1. Describe the chemotherapy regimens before using abbreviations. Use correct unit abbreviations (e.g. g/L instead of g/l).
2. Discuss about time of onset (as initial presentation, during the course of disease, etc...)
3. Discuss about the NL patterns seen in patients with lymphoma (authors may compare it with NL due to leukemia).
4. Better description of the neurological examination (e.g. "limited flexion and extension of right finger").

Level of interest: An article of importance in its field

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
