Reviewer’s report

Title: HIV/AIDS presenting with stroke-like features caused by cerebral Nocardia abscesses: a case report

Version: 0 Date: 01 Sep 2015

Reviewer: JUN YANG

Reviewer's report:

As reported by the author, DWI has better sensitivity (probably the highest) in detecting cerebral abscesses, along with hydrocephalus. By judging from both lesion morphology and DWI-ADC maps, this method may help to differentiate cerebral abscesses from stroke at early stage. More patients need to be collected for imaging-based evaluations.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
