Reviewer's report

**Title:** Progressive Transcortical Sensory Aphasia and Progressive Ideational Apraxia Owing to Temporoparietal Cortical Atrophy

**Version:** 6  **Date:** 10 August 2015

**Reviewer:** Jordi A. Matias-Guiu

**Reviewer's report:**

The authors have been addressed all my suggestions and commentaries properly.

Minor Essential Revisions:
- Page 14, line 243. "Currently, progressive Wernicke's aphasia is most likely categorized as lvPPA". The sentence is not entirely appropriate. Classification of progressive aphasias is not easily comparable to classical (vascular) aphasias. But conduction aphasia would be equivalent to lvPPA, and transcortical sensory aphasia to semantic aphasia. Comprehension in lvPPA is not impaired, except for long phrases due to a phonological/working memory deficit.
- There are some minor mistakes in the References (for instance, "Gorno-tempini" instead of "Gorno-Tempini" (both with capital letters).

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
