Reviewer’s report

Title: May clinical neurophysiology help to predict the recovery of neurological early rehabilitation patients?

Version: 0 Date: 29 Sep 2015

Reviewer: M.Ali Babi

Reviewer's report:

In this article; the author(s) hypothesize the role of clinical neurophysiology as a predictor of outcome from neurological and neurosurgical early rehabilitation. However, this study is flawed because of several consideration:

1. There is lack of control in this study to infer any significant/meaningful results

2. Wide heterogeneity of patients included in this study

3. Wording and several typos

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review
