Reviewer’s report

Title: May clinical neurophysiology help to predict the recovery of neurological early rehabilitation patients?

Version: 0  Date: 01 Oct 2015

Reviewer: Ayeesha Kamran Kamal

Reviewer's report:

I suggest you discuss the limitations of each neurophysiologic test and its strengths as it applies to the stroke patient in further detail. What are the technical limitations for instance. Also please detail if any previous studies have been done on the subject and how predictive they were. Why would one opt for neurophysiology as a predictor as opposed to a DWI MRI for instance or would this be part of a battery of tests? And if so, what is the ancillary information provision to justify this testing?

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
