Reviewer’s report

Title: Effectiveness, safety and health-related quality of life of multiple sclerosis patients treated with fingolimod: results from a 12-month, real-world, observational PERFORMS study in the Middle East

Version: 1 Date: 19 Apr 2017
Reviewer: Pasquale Annunziata

Reviewer's report:

This new version of the manuscript has partly met the reviewers' suggestions. The main concern remains the lack of any statistical attempts just for Kaplan-Meier curves and EDSS comparisons. If the authors present both curves in Fig. 4, it is mandatory to show log rank values, otherwise they should present separate curves in different panels of the fig. 4. However, due to the characteristics of the study, the authors should add to discussion a paragraph displaying the limitations of the study including the reasons of the lack of neuroimaging findings and difficulties to compare the findings of both cohorts. This should be highlighted in the abstract too.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
