This manuscript examined whether there was an association between serum CCCK-18 levels and mortality in ischemic stroke patients. The subject is worthy to study and the information is new.

In the introduction, the background information of ischemic stroke and CK, and significance of this project were provided.

In the methods, the subjects and study process were described.

In the results, the data was presented with table and figure.

In the discussion, the results were appropriately evaluated and compared with previous studies.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.
