Title: Epidemiology of non-traumatic spinal cord injury in Uganda: a single center, prospective study with MRI evaluation

Version: 1 Date: 14 Jun 2018

Reviewer: Ann Choe

Reviewer's report:

Authors have addressed all major and minor concerns I have raised previously. One thing I would like to point out is that the actual image acquisition parameters of the listed pulse sequences (i.e., image resolution, TR/TE, flip angle, etc) are still missing. Although the authors claim otherwise in the response, the lines 58/59 does not include the requested additional information. However, I acknowledge that this information, while informative to readers, may not be essential for the ultimate goal/purpose of this particular manuscript. I would still encourage the authors to include this information so others will be able to replicate the authors' study.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.
