Reviewer's report

Title: Association between autonomic dysfunction and olfactory dysfunction in Parkinson’s Disease in southern Chinese

Version: 0 Date: 13 Nov 2018

Reviewer: Jongkyu Park

Reviewer's report:

Because Hyposmia is a common symptom of Parkinson's disease, the accuracy of the diagnosis is important if the patient has Parkinson's disease without hyposmia. Additional explanations are acceptable to the reader, and it would be nice to attach DAT scan results and LEDDs.

Overall, the rate of GI, urinary, and cardiovascular symptom was high in PD with hyposmia, which is similar to that seen in MSA-P patients(https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0180744), and it is necessary to confirm that PD patients are completely excluded from MSA-P patients. It would be better to exclude H & Y stage 4 patients who are progressing faster than 7.86yrs Disease duration.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
Quality of written English
