Reviewer’s report

Title: Progressive stenosis and radiological findings of vasculitis over the entire internal carotid artery in moyamoya vasculopathy associated with Graves’ disease: A case report and review of the literature

Version: 1 Date: 11 Oct 2018

Reviewer: Klearchos Psychoyios

Reviewer’s report:

It is a well written and interesting case report as well as review of the literature regarding a very rare complication of Graves Disease. Consider adding some points to clarify the case presentation:

1. Possible systematic manifestations of Graves Disease during the initial diagnosis
2. Provide us with information regarding cardiac evaluation during the initial event.
3. On line 93 (p.6) I believe that it is more accurate to write «cortical and subcortical infarcts in the left middle cerebral artery territory»
4. On line 430 (p.28) I believe «aortic dissection due to vasculitis» is not correct. In order to imply a possible dissection of the terminal portion of the left ICA, it should be better to provide Vessel Wall MRI images with Fat Sat Black Blood T1 before and after gadolinium enhancement.

I would be happy to review the revised article.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
