Title: Isolated Subdural Hematoma Secondary to Dural Arteriovenous Fistula: A Case Report and Literature Review

Version: 1 Date: 20 Sep 2018

Reviewer: Katharina Busl

Reviewer's report:

The authors have acknowledged but not addressed the concerns raised both by myself and reviewer #2. The provided revisions are minimal and do not really reflect the main point that was addressed in both reviewers' comments - that this might better be suited as a literature review with an exemplary case, rather than a case report - due to the lack of novelty of the case, which the authors acknowledge as well, but the benefit of a well written literature review.

I continue to have concerns with recommendations for approach to diagnosis and care that are made based on a single experience - the authors should state much more clearly that this would be the recommendation of a personal approach, but cannot defend the idea to propose guidelines or circumstances based on the experience of one rare case.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.
