Reviewer’s report

Title: Peripheral Vascular Responses to Acetylcholine as a Predictive Tool for Response to Cholinesterase Inhibitors in Alzheimer's Disease

Version: 1 Date: 14 Nov 2018

Reviewer: Hermona Soreq

Reviewer's report:

Thank you for the response to the comments, which has indeed added to the value of this manuscript. However, one key point remains which calls for correction: the agents which affect cholinergic signaling far exceed anti-cholinesterases, and include simple over-the-counter approachable anti-allergy pills like Benadryl or anti-muscarinic agents for controlling incontinence etc. Numerous leading articles reflect a major impact of these treatments on the risk for cognitive decline. It is important to add those agents to the list of tested details and cite the papers reporting their impact.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Unable to assess

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
Quality of written English
