Title: Real World Experience of Patients with Amyotrophic Lateral Sclerosis (ALS) in the Treatment of Spasticity using Tetrahydrocannabinol:Cannabidiol (THC:CBD)

Version: 1 Date: 23 Jul 2019

Reviewer: Susana Pinto

Reviewer's report:

The authors have addressed all my previous concerns.

I have only three extra minor points.

- It is difficult to understand how a patient with an ALSFRS-R of 0 would be able to cope with any kind of study (in your table).

- Being this a cross-sectional study in which 40% of the patients stopped the medication, it would be important to clarify at least the demographics of those patients, as the reasons for stopping it are not provided.

- Please include in Conclusion that 40% of the patients decided to stop the medication.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.
