Reviewer’s report

Title: Taste disorder in facial onset sensory and motor neuronopathy: A case report

Version: 0 Date: 03 Jan 2020

Reviewer: Mamede de Carvalho

Reviewer's report:

This is an interesting report that contains original data. Overall it is well-written and the information is complete.

The authors need to improve EMG description. The authors should detail which muscles were tested, in particular in limbs, and in which muscles were changes observed, mentioning if active/acute, chronic or active/chronic (combined) neurogenic changes were detected. In addition, information about fasciculation potentials should be added. It is important to mention if EMG abnormalities complied the Awaji criteria for supporting diagnosis of ALS. Finally. It would be of relevance to know if repeated EMG studies were performed.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
