Reviewer's report

Title: Taste disorder in facial onset sensory and motor neuronopathy: A case report

Version: 0 Date: 24 Jan 2020

Reviewer: Steve Vucic

Reviewer's report:

The manuscript describes an unusual case of FOSMN syndrome presenting with taste issues. The manuscript is well written and conclusions are sound. I have some minor comments.

1. The blink reflex figure should be improved.

2. Was there any atrophy on the MRI of the cervical cord.

3. How reliable is needle EMG of the thoracic paraspinal muscles in assessing neurogenic changes? Given the overlap of multiple motor units, I would omit this form manuscript and just comment on ongoing changes.

4. What dose of IVIg was used? Please specify.

5. Please update bibliography by including the Vucic et al paper from neurology 2012.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
