Reviewer's report:

I have following comments regarding the article titled "Pisa syndrome induced by switching of a choline-esterase inhibitor treatment from donepezil to galantamine: A case report". Overall the case report is interesting. The quality of the manuscript can be improved with following changes: The authors are suggested to include a table including all reported cases of PISA syndrome following exposure to cholineesterase inhibitors (ChEIs). This will further strengthen the hypothesis proposed by the authors.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.
