##The results chapter, I recommend you to add the absolute numbers for all the tables.

2. The discussion chapter, I was not able to find three previous research. It did not enough to compare the other researcher's outcomes. Especially one of three is your same research group’s research. You should mention that the results showed same insight or differ from these results. You have to search more references and add more explanation about the relationship with partner abuse and antenatal care for pregnant women.

Level of interest: An article of importance in its field

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: Yes, and I have assessed the statistics in my report.
