Reviewer's report

Title: Team training in obstetric and neonatal emergencies using highly realistic simulation in Mexico: Impact on process indicators in a cluster randomized trial

Version: 2 Date: 23 May 2014

Reviewer: william keenan

Reviewer's report:

Important work requiring commitment of many months and cooperation of many institutions. Question is well defined. Methods are appropriate and well described. Discussion and conclusions are balanced and support. See suggestions below.

Limitations are well stated.

Minor Essential Revisions:
Could be written more concisely. One section (page 5) describes the cluster randomized design but no data from controls are part of this manuscript.
Final paragraph of Results emphasizes a non significant trend. Should omit.
High Priority Data Tables: #2, 3 and 5. Others could be adequately addressed in text.

Picture could be best available for readers in electronic appendix.
Authors might include some recommended next steps in this research.

Check spelling. Note "Ditribution" in Table 5.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

No Conflicts of interest.
