Title: Levels and determinants of continuum of care for maternal and newborn health in Cambodia—evidence from a population-based survey

Version: 5 Date: 16 January 2015

Reviewer: Saifuddin Ahmed

Reviewer’s report:

The authors have addressed the concerns I have raised during the first review. The manuscript has improved substantially. I consider that the paper will add to our knowledge base in better understanding the continuum of maternal care in Cambodia. The paper may be accepted for publication.

I have one minor point in reference to the 2nd para in p.9:

Considering a large difference between facility and skilled birth delivery (17%), the authors may consider to discuss briefly the distribution of skill providers at home deliveries in justifying that the role of doctors in skipping hospitals for home deliveries. It is possible that Cambodia health system has dedicated midwives for home deliveries; needs to discuss briefly the health system for maternity care.

Insert WHO reference in p.4.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
