Title: Knowledge translation tool to improve pregnant women’s knowledge of gestational weight gain and the risks of gaining outside recommendations: a non-randomized intervention study

Version: 1
Date: 23 November 2014

Reviewer: Carla van der Wijden

Reviewer's report:

Gestational weight gain is an important risk factor in developing obesity for the mother and her offspring.
This study shows that introducing a tool, increases awareness. If this leads to an increase of the number of women gaining according the guidelines is not mentioned.
Unfortunately this study does not add much. Influencing gestational weight gain is not that easy.

Level of interest: An article of insufficient interest to warrant publication in a scientific/medical journal

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
