Reviewer's report

Title: Associations between gestational anthropometry, maternal HIV, and fetal and early infancy growth in a prospective rural/semi-rural Tanzanian cohort, 2012-13

Version: 2 Date: 23 April 2015

Reviewer: andreas chiabi

Reviewer's report:

Minor Essential Revisions

Comment 6 under methods: The Ethical aspect is good and well said, but should be precised in the text

Comment 104 under methods: The fact that the HIV confirmation test was not done at the end of pregnancy or to the best in the delivery room should be put in the text as a selection bias.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:
