Reviewer's report

Title: Factors Associated with Compliance with the Recommended Frequency of Postnatal Care Services in Three Rural Districts of Tanzania

Version: 2 Date: 14 May 2015

Reviewer: Lorraine Walker

Reviewer's report:

Major compulsory revisions:

1. None

Minor Essential Revisions:

2. Overall this is a well written manuscript, with a clear statement of purpose, and well executed methods and analysis. Several missing words were noted, though: p. 4, line 98: insert "at" after "WHO recommends"; also on page 4, line 103: insert "of" after "with most"; and finally, on page 9, line 210: correct spelling of "antenatal" (spelled "antennal").

Discretionary revisions:

3. The section on "Potential Study Limitations" (lines 163-183) would be better place on the Discussion, just before the Conclusions. As currently placed, this section disrupts the flow from aims to Methods.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:
