Reviewer’s report

Title: Implementation of guidelines for multidisciplinary team management of pregnancy in women with pre-existing diabetes or cardiac conditions: Results from a UK national survey

Version: 0 Date: 09 Jun 2017

Reviewer: Eleanor Scott

Reviewer's report:

This was a well written audit of current clinical practice across the U.K., with respect to the multidisciplinary team provision of cardiac and diabetes antenatal care. It will serve as a useful document for subsequent work on the effectiveness of MDTs, given the current consensus that cardiac and diabetes care should be delivered in this way.

The diversity in practice was extremely interesting. It would be great if this work could be extended and linked to the diverse pregnancy outcomes in the national diabetes in pregnancy audit database. I.e whether centres with a full MDT as per NICE show better pregnancy outcomes, and to what effect those without a full MDT have worse pregnancy outcomes etc.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
