Reviewer’s report

Title: Intramuscular injection, intravenous infusion, and intravenous bolus of oxytocin in the third stage of labor for prevention of postpartum hemorrhage: a three-arm randomized control trial

Version: 2 Date: 03 Dec 2018

Reviewer: Amir Aviram

Reviewer's report:

The aim of this study was to assess three routs of oxytocin administration (IM, IV bolus, and IV) with regards to PPH, using an open-label, randomized, 3-arm trial.

Introduction: Well-written, concise and to-the-point.

Methods: Well-written.

Results: Well-written.

Discussion: Well-written.

General comments:
This is a well conducted study. The research question is adequate, the methodology is sound and answers the research question, the results are described clearly and the discussion summarize the key points perfectly. I have only one minor comments - did the authors compare IV bolus to IV infusion as well? can be interesting to see the differences.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
