I believe that this manuscript has been improved by the revisions made. I still have a couple of minor concerns that I believe need addressing:

1. The literature cited concerning studies where associations between age at menarche and future GDM risk were tested is still incomplete.

2. The manuscript is a little difficult to read in parts and I would suggest that minor changes to the English language used are made by either a native English speaker or a professional who provides such services.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
