Reviewer’s report

Title: Single Arm NCRI Feasibility Study of CHOP in Combination with Ofatumumab in Induction and Maintenance for Patients with Newly Diagnosed Richter's Syndrome

Version: 2 Date: 4 January 2015

Reviewer: Preetesh N Jain

Reviewer’s report:

No other major comments for the study proposal.

The authors say that 7 patients achieved CR so it will be worthwhile to see the final results and responses. How many patients were treated so far? Did they have non responders?

Do the authors anticipate addition of ibrutinib to O-CHOP? This can be discussed further. However, since this is a study proposal, it is fine.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
