Reviewer's report

Title: Cell type- and Tumor zone-specific expression of pVEGFR-1 and its Ligands influence Colon cancer Metastasis

Version: 2

Date: 22 November 2014

Reviewer: Adhemar Longatto Filho

Reviewer's report:

The authors performed an interesting study. However, the nuclear positive immunostaining is very intriguing but the explanation of the authors was very timid. The authors could consider ancillary molecular techniques to demonstrated the real status of positive immunoreaction.

The micro vessel density is poorly described. It is necessary to explain more detailed what the authors considered MVD.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:

I declare I have no conflict of interest.
