Reviewer's report

Title: Oridonin Stabilizes Retinoic Acid Receptor Alpha Through ROS-activated NF-kappa B Signaling

Version: 4 Date: 18 February 2015

Reviewer: Jia Zhou

Reviewer's report:

This revised manuscript has somewhat improvement. However, the concerns raised by reviewers are not sufficiently addressed. For example, the introduction on the recent research efforts around oridonin and its close analogs as well as the relevant mechanism studies is still too brief for the readers who are not familiar to this area to get a better and complete sense. Some important references listed in the previous review comments are simply ignored to cite.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
