Reviewer's report

Title: Circulating miR-200c and miR-141 and outcomes in patients with breast cancer

Version: 4 Date: 27 December 2014

Reviewer: Michael Georg Schrauder

Reviewer's report:

Major Compulsory Revisions

The shortcomings of the study: small number of patients and controls as well as sample normalization prevail.

On the other hand, the authors present interesting and important new data of this "exploratory analysis" regarding the association of miRNAs and outcome in BC patients and all the important point are discussed in the manuscript. Therefore, I would support the publication of the work in the current state.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
